ABOUT

I am performance-driven and eager to utilize my technical and business knowledge to optimize an organization's cybersecurity posture. I am seeking internships and professional experience in cybersecurity positions, which is my area of advancement. I am currently a Computer Engineering student at Sakarya University of Applied Sciences. I am proficient in the following technologies and tools: Nmap, Burp Suite, Splunk, Metasploit, Nessus, Hydra, Sqlmap, Python, C++, C, ASP.NET, C#, GNU/Linux, Nginx, Apache, Docker, MySQL, MariaDB, MongoDB, MSSQL, Git, OWASP Top 10, MITRE ATT&CK Framework, TCPDUMP, Yara, Ghidra, Binary Ninja, Wireshark, Kibana, Elasticsearch, Bash, HTML, CSS, Javascript, AWS, PostgreSQL, Wazuh, Frida .

EXPERIENCE

SUBU Information Technologies Community, Sakarya - Information Security Director

OCTOBER 2025 - PRESENT

- As the Information Security Director at the Information Technologies Community of Sakarya University of Applied Sciences, I lead initiatives focused on enhancing cybersecurity awareness. I organize and deliver applied training sessions, provide cybersecurity consulting, and mentor students. Through these activities, I aim to foster creative and strategic thinking in the field of cybersecurity and build a community that actively contributes to a more secure digital future.

Turkey Cyber Security Cluster, Sakarya - Cloud Security Team Member

APRIL 2025 - PRESENT

- During my time working in the Cloud Computing Security Team at the Turkish Cybersecurity Cluster, I gained comprehensive knowledge about cloud solution models, architectures, and security layers. I received various trainings on the security mechanisms, access

management, network segmentation, data protection, and monitoring processes of different cloud service providers, particularly AWS. I conducted practical work on cloud architecture design, infrastructure security, secure configuration management, and threat analysis. I also played an active role in projects involving secure structures, risk assessment, and automation examples in cloud-based systems. This experience enhanced both my technical knowledge and my ability to design secure systems in cloud environments.

TryHackMe, Remote - CTF Player

OCTOBER 2025 - PRESENT

- I solved 240 CTF rooms and managed to rank in the top 1% globally. I developed my skills in Application Security, Network Security, and Malware Analysis.

Hackviser, Sakarya - Campus Ambassador

SEPTEMBER 2025 - DECEMBER 2025

- As a Hackviser Campus Ambassador, I was responsible for promoting cybersecurity awareness and education at my university. My duties included organizing workshops and events, sharing Hackviser resources with students, and mentoring students. This position allowed me to connect with industry professionals, build a stronger cybersecurity community at my university, and develop my communication skills.

Secure Computing, Remote - DevSecOps Intern

JUN 2025 - AUGUST 2025

- During my DevSecOps-focused internship at Secure Computing, I actively used tools such as Kibana, Elasticsearch, Logstash, and Filebeat. Throughout this process, I gained practical experience by performing tasks such as system monitoring, detecting access to systems, identifying malware, and responding to incidents.

SUBU Department of Information Technology, Sakarya - Cyber Security Intern

JANUARY 2025 - FEBRUARY 2025

- I completed my mandatory twenty-day internship in the field of Cybersecurity at the Information Processing Department of Sakarya University of Applied Sciences. During this process, I investigated potential security vulnerabilities through Penetration Testing and Vulnerability Assessments, scanned the university's websites, network, and systems, reported the security vulnerabilities I found, and then worked with the software team to close these security vulnerabilities.

EDUCATION

Sakarya University of Applied Sciences, Sakarya - Computer Engineering

SEPTEMBER 2023 - JUN 2027

ACHIEVEMENTS & CONTRIBUTIONS

CVE-2026-12386 - 2026

I identified a buffer overflow vulnerability in Pardus Pen, a software application developed by TÜBİTAK BİLGEM, during my annual security research. I responsibly disclosed the vulnerability through TR-CERT, which led to its remediation in version 4.2.1. The vulnerability was subsequently assigned an official CVE identifier and published in the international CVE database as **CVE-2026-12386**.

CERTIFICATIONS

Google Cyber Security Professional - 2024

Splunk, Linux, Sql, Python, Cyber Threat Intelligence, Incident Response, Network, Windows.

<https://coursera.org/share/4a19736506af91f181609ae9007cb9e5>

HackTheBox Certified Bug Bounty Hunter - 2024

Application Security, Vulnerability Asssesment, Web Application Security, Linux.

<https://academy.hackthebox.com/achievement/1479618/path/17>

TryHackMe Cyber Security 101 - 2024

Linux, Windows, Cryptography, Offensive Security, Defensive Security, Network, Security Solutions.

<https://tryhackme-certificates.s3-eu-west-1.amazonaws.com/THM-7BQPS1WSXL.png>

TryHackMe Pre Security - 2024

Linux, Windows, Network.

<https://tryhackme-certificates.s3-eu-west-1.amazonaws.com/THM-7BQPS1WSXL.png>

TryHackMe Complete Beginner - 2024

Linux, Windows, Network, Web Applications, Cryptography.

PROJECTS

Serverless API - AWS Lambda + API Gateway (Python3) - 2025

The goal of this project is to understand serverless architecture and develop a cloud function running on AWS Lambda that is accessible via HTTP through API Gateway.

The API created as part of this project takes the name and optional number parameters from the user, returns a message containing the user's name, and if the number parameter is sent, calculates its square and responds.

https://github.com/muhammedkayag/Serverless_AWS_Lambda_API
